

Introduction to python

François Serra, Marco Di Stefano, Marc A Marti-Renom
Genome Biology Group (CNAG)
Structural Genomics Group (CRG)

Why python?

- good trade off between human time and machine time
- easy to pick up
- widely used
- well documented
- many libraries for research
- most popular alternatives: R, perl, (java)

Definitions

- variables
- loops
- conditionals
- lists, tuples, dictionaries

```
a = 1  
b = 3.14  
c = 'charles'
```

```
for i in range(0, 10, 1):  
    print i
```

```
i = 0  
while i < 10:  
    # print i  
    i = i + 1
```

```
for i in range(0, 10, 1):  
    if i == 3:  
        print 'we have 3'  
    elif i > 3:  
        print 'we have many'  
    else:  
        print 'we have few'
```

```
a = [0, 1, 2, 3, 4]  
b = (0, 1, 2, 3, 4)  
c = {'one': 11, 'two': 22  
     'three': 33, 'four': 79}
```

Quick start

- Open a shell and type “python”
- try previous examples on the “python shell”
- write these lines together in a text file and run it
